Subject	
Increasing diversity of gas quality	

Dear Madam or Sir,

This letter is intended to inform you about the increasing diversity in gas composition transmitted through our network.

The gas composition in the Netherlands has been changing gradually over the years, arising from the declining production of Dutch gas and the gradual replacement of Dutch gas by natural gases from other fields. This process has been going on for years, and it is expected to accelerate in the next few years. The composition of high calorific gas will change also because of this. The gas supplies that are being contracted by market parties for the near future could influence the composition of the gas flows, which could affect the combustion behaviour of gas utilization equipment. It is important for you as a party directly connected to the national gas network to anticipate on the expected increasing diversity. This will allow you to check your equipment in time and make adjustments if needed.

Beside this letter and attachment you can find more information about this subject on the website www.hoezoandergas.nl.

We hope we have informed you sufficiently with this information.

Yours sincerely,
Gas Transport Services B.V.

Jan van der Voort
